

# VIA FERRATA DU ROC DE TOVIERE

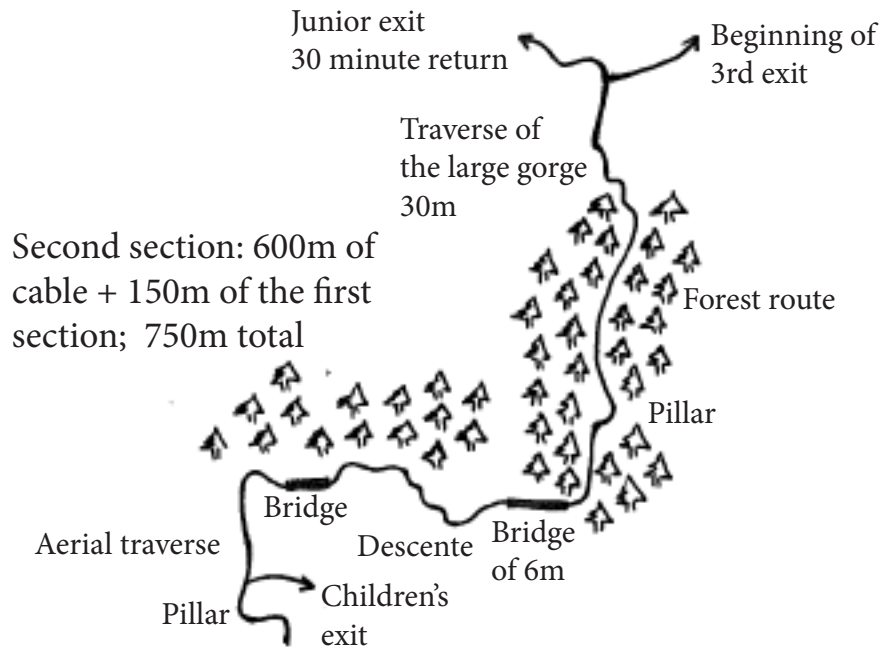

## Description of the third section:

Complete the first two sections, cross the 40m walking bridge, and pass the pillar “Dalle du lézard”. Do not begin the long travers on the large face (due to high chances of falling rocks) but continue the climb through the “Suspended garden” to the exit. To return, take the winding path through the cliffs back to la Daille.

## Description of the second section:

For the second section (which is a little more challenging), continue through the aerial traverse, then through the forest passage, onto another walking bridge. The athletic section follows (30m) with a bridge and a pillar. The route ends after a series of ascending traverses, interrupted by sections of varying steepness. The exit, found below the walking bridge, brings you back to resort in 40 minutes.

## Description of the first section:

This first section is specifically adapted for children. The route is a small wall followed by a long ascending traverse (which can be quite challenging for smaller children), a walking bridge, and an ascension of a pillar. An exit back to resort along the forest path is available (for children) on the right side.
